COVID-19 after April 20th
Exit from the lockout.

Hua Hin, den 14.04.2020

Dear Federal Chancellor,

everyone knows that we are facing a crisis of unprecedented proportions. It shows the powerlessness of all people in the face of an unknown virus with its deadly threat to all mankind.

The restrictions imposed out of initial ignorance of the virus and the fear that followed from it are proving to be the right way to contain the epidemic and to gain time. In the meantime, experience and knowledge have been gained that enable us to control the virus instead of it controlling us as before.

Despite all the real possibilities that are emerging to gradually lift the ban, a partial relaxation of the ban carries the risk of a new outbreak of the disease as long as the 70% mark of infected and immunized persons is not reached and as long as there is allegedly no direct antidote to the virus.

Well, we have an agent that has been proven to provide immediate control of the virus. Unfortunately, the drug is taboo among orthodox doctors and scientists, although it has been known since ancient times and was used as an antiseptic until the first half of the last century. The tabooed drug/active substance is colloidal silver (CS).

It must be released immediately for research, testing on humans, for series of tests, just like other active substances that are tested as antidotes.

It is not about an unapproved drug, but about a natural process: pure silver produces antiseptic colloidal silver together with body fluids. This effect has been scientifically proven. The natural process is now part of the common property of human culture.

On the occasion of the pandemic, CS must be taken out of the rumour corner immediately. Scientists in government services are obliged to either clear up or confirm any doubts about CS through controlled test series. They will not do so unless you and your Minister Spahn demand it.

CS with its effect can be used purposefully for the control of epidemics.

You can read my prescription against COVID-19 in the appendix/link. There the scientific in vitro studies are mentioned. I have successfully tested the formula on myself in 40 years of practice and will also use it against COVID-19.

Assuming that the RKI determines the curative effect of colloidal silver when applied to COVID-19 in a controlled manner, as stated in my prescription -- I presume an independent, broad-based series of tests -- we would have the first remedy to directly combat this virus.

We would immediately be able to actively protect or treat thousands of particularly vulnerable people (nursing homes, old people's homes, hospital staff, nursing services, doctors, dentists, etc.), and save their lives without using the limited capacity of respiratory equipment.

Think further of those affected by multi-resistant and pan-resistant germs, e.g. the respiratory germ *Klebsiella pneumoniae*, infested people who are condemned to death because the pharmaceutical industry has no remedy for this. These people would have immediate hope.

Imagine further that with this liberating blow in favour of freedom of thought and action in medical research, you are opening the way for the vision of the pinpoint, technically controlled application of the natural phenomenon of colloidal silver in the fight against internal infections that were previously considered untreatable.

Finally, remember that COVID-19 is a temporary crisis. Apart from the acute problems mentioned above, there are new pandemics expected in the future for which CS can be considered. Treatment with CS is not only very effective, it also offers a cheap and quick solution.

Dear Federal Chancellor, with this unique coup you can bring your career to a brilliant climax without any risk. You have shown that you can carry through lonely decisions, especially knowing that you have the majority of the population behind you. Please do it this one more time. It would make you famous far beyond the borders of Europe and for a long time to come.

I very much hope for your understanding and your own inspiration

With kind regards

Bernd Haase
